

## Fire Risk Assessment Campsite

Risk Assessment – Record of significant findings		
<b>Risk assessment for:</b>	Campsite @ Walton firs	<b>Assessment undertaken by:</b> <b>Assessment undertaken by:</b> Richard Hardy <b>Qualifications:</b> Fire Risk Assessment CPD

Step 1 – Identify fire hazards		
<b>Sources of ignition:</b> Fires, Equipment with Naked flames	<b>Sources of Fuel:</b> Heathland, Woodland, Dry Grass, Tentage.	<b>Sources of Oxygen:</b> Atmosphere

Step 2 – People at Risk
Campers, Visitors, staff.

Step 3 – Evaluate, Remove, Reduce and protect from risk	
(3.1) Evaluate the risk of the fire occurring.	Minimal risk of fire as campfires are always kept small and under supervision. Groups to follow their own Process and procedures for equipment with naked flames. Refer to fire lighting SOP for bushcraft fire monitored by Walton Firs staff. Water is used to douse fire completely. Fires are never left unsupervised.
(3.2) Evaluate the Risk to people from a fire starting on the premises.	Little risk to campers, Visitors and staff as fire areas are out in the open, easy to escape from areas affected. Plenty of staff and adult supervision around to spot risks and prevent fires spreading.
(3.3) Remove and reduce the hazards that may cause a fire.	Site gas stored in cage and away from campers and campsites. With no form of ignition source close by. Campers/Visitors smoking only in the carpark, Employees to smoke only in the crew areas.
(3.4) Remove and Reduce the risks to people from a fire.	Campers have own fire extinguishers or equivalent etc on site following their own process and procedures. All site water points have a hose pipe connection for hoses. Site Fire Cart equipped with hose and connectors. Fire action plan in place. Campers to follow campsite etiquette as outlined in camping welcome pack.
